## ALLIANCE FOR INNOVATION ON MATERNAL HEALTH

The Alliance for Innovation on Maternal Health is a national, cross-sector commitment designed to support best practices that **make birth safer, improve maternal health outcomes, and save lives.**

You can find more information at [saferbirth.org](https://saferbirth.org).

This program is supported by a cooperative agreement with the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) under grant number UC4MC28042, Alliance for Innovation on Maternal Health. This information or content and conclusions are those of the author and should not be construed as the official position or policy of, nor should any endorsements be inferred by HRSA, HHS or the U.S. Government.

## Before We Get Started

- ▶ You are **muted** upon entry to the call.
- ▶ **You will have the ability to unmute** yourself during Q&A times.
- ▶ We encourage participants to **remain muted** to reduce background noise.
- ▶ If you are experiencing technical difficulties, please chat an AIM staff member or **email [aimdatasupport@acog.org](mailto:aimdatasupport@acog.org)**

**This presentation will be recorded.**

**Both the slides and recording will be available on the AIM Data Resources Webpage and shared in the follow-up newsletter.**

Figure 1

# Health and Health Care among People of Color Compared to White People

NUMBER OF MEASURES FOR WHICH GROUP FARED BETTER, THE SAME, OR WORSE COMPARED TO WHITE PEOPLE:

Worse No difference Better No data

NOTE: Measures are for the most recent year for which data are available. "Better" or "Worse" indicates a statistically significant difference from White people at the  $p < 0.05$  level. No difference indicates no statistically significant difference. "Data limitation" indicates no separate data for a racial/ethnic group, insufficient data for a reliable estimate, or comparisons not possible due to overlapping samples. AIAN refers to American Indian or Alaska Native. NHOPI refers to Native Hawaiian or Other Pacific Islander. Persons of Hispanic origin may be of any race but are categorized as Hispanic for this analysis; other groups are non-Hispanic.

“Although the collection of race, ethnicity and language data does not necessarily result in actions that will reduce disparities and improve care, the absence of the data guarantees that none of that will occur.”

***We Ask Because We Care***

# Why should we invest resources in this activity?

### Race and Ethnicity – Information for Staff

#### Why we ask this important question

- We want to make sure that all of our patients get the best care possible. We collect racial/ethnic background information so that we can review the treatment that all patients receive and make sure that everyone gets the highest quality of care.
- Collecting this data helps to evaluate population trends and ensure nondiscrimination on the basis of race and national origin. It can also help identify disease trends across different populations
- Covid 19 has highlighted the importance of knowing what population of people are affected by a particular disease
- City, state and federal agencies require hospitals to collect this data so we know the characteristics of the population we serve
- Race and Ethnicity data is sometimes used in research studies to help improve medical care we have available to our patients
- The confidentiality of what you say is protected by law. The only people who see this information are registration staff, administrators for the hospital, and the people involved in quality improvement and oversight. ***NYP takes patient privacy very seriously***, and therefore this information is also protected by our policies and practices.

#### Key Concepts

What is the difference between race and ethnicity?

- **Race** is a population considered distinct based on physical characteristics and self-identification but is not considered primarily biological or genetic in nature
- **Ethnicity** represents a social group with a shared sense of identity, geography, and cultural roots, which may occur despite racial differences. Example: Puerto Ricans are of many different races, but they have a shared sense of Hispanic culture and customs

#### What Staff Need to Know and Do:

- Staff must inquire about patients' race and ethnicity and should not make assumptions.
- Suggested script during the patient interview:
  - *In order to guarantee that all patients receive the highest quality of care and to provide the best services possible, we are asking all patients about their race, ethnicity, and language*
  - *How would you like your race and ethnicity recorded in our system?*
    - *Are you of Hispanic or Spanish background?*
      - **Hispanic** (person of Cuban, Mexican, Puerto Rican, Central or South America or other Spanish origin regardless of race)
      - **Non-Hispanic**
      - **Declined.** A person who is unwilling to choose/provide a race category or cannot identify him/herself with of the races listed.
      - **Unknown.** Select this category if the patient is unable to respond, there is no available family member or caregiver to respond for the patient, or if for any reason, the demographic portion of the medical record cannot be completed.
    - *What Race do you associate with?*
      - **White** – A person having origins in any of the original peoples of Europe, the Middle East, or North Africa.
      - **Black or African American** – A person having origins in any of the Black racial groups of Africa.
      - **American Indian or Alaska Native** – A person having origins in any of the original peoples of North and South America (including Central America) and who maintains tribal affiliation or community attachment.
      - **Asian** – A person having origins in any of the original peoples of the Far East, Southeast Asia, or the Indian subcontinent including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Pakistan, the Philippine Islands, Thailand, and Vietnam.
      - **Native Hawaiian or Other Pacific Islander** – A person having origins in any of the original peoples of Hawaii, Guam, Samoa, or other Pacific Islands

# Staff Education

## 4-page FAQ and Tip Sheet

Best practices, references, and sample answers to potential questions

### Equity Matters to NYP

#### Tip Sheet for Staff Collecting Race & Ethnicity Data

In 2020, NewYork-Presbyterian launched the Dalio Center for Health Justice. The overarching goals of the Center are to be a leader in understanding and improving health equity, and drive action that results in measurable improvements in health outcomes for all. We formed the Center to address longstanding health disparities due to race, socio-economic differences, limited access to care, and other complex factors that impact the wellbeing of our communities disproportionately.

To support these aims, NewYork-Presbyterian is supporting enterprise-wide efforts to improve collection of data on race and ethnicity. We collect racial/ethnic background information so that we can review the treatment that all patients receive and make sure that everyone gets the highest quality of care.

This *Tip Sheet* provides sample answers to potential patient questions and details about how to interpret the race and ethnicity options.

#### Sample Questions from Patients

##### Why do we ask about race, ethnicity, and language?

We want to make sure that all of our patients get the best care possible. We collect racial/ethnic background information so that we can review the treatment that all patients receive and make sure that everyone gets the highest quality of care. We use race, ethnicity, and language data:

- To better understand the community we serve
- To be culturally sensitive to the workforce and our patients
- To understand need for interpreter services
- For grant applications and potential donors
- To help appropriately target quality initiatives
- To fulfill our compliance obligations

##### What do race and ethnicity have to do with health?

Race continues to be mistakenly used as a marker of biological, genetic, and social differences in humans. While both scientists and human rights activists have been successful in discrediting the validity of race as a concept to understanding human difference – racial discrimination continue to shape the lives, opportunities, and health of many.

##### Who will see the information? How will it be shared?

NYP limits access to patient information, including into patients' race and ethnicity, to instances where the information is necessary for providing care, hospital operations, and billing. NYP has dedicated teams in place to help safeguard your information including the Office of Corporate Compliance and the Information Security Department. For more information, please see the Notice of Privacy Practice (NOPP).

##### Who are you collecting this information from?

We are asking all our patients for this information.

## Staff Education

Small Group Presentations  
In person sessions with open Q&A

### How Do Patients Feel?

It is important for hospitals and clinics to...

...collect information from patients about their race or ethnic background

...conduct studies to make sure that all patients get the same high-quality care regardless of their race or ethnic background

### Why ask patients?

- **Self-reporting** is the most accurate and consistent source of information
  - We do *not* make any assumptions based on how a person looks
  - Patients are more likely to select the same categories to describe themselves over time than staff who are assuming or guessing
- **All** patients should be asked about their race/ethnicity, and language

# Patient Communication

**We ask because we care.**

By asking about your race, ethnicity and language, we are better able to deliver health care equally to all patients.

What is your race?

What is your ethnicity?

What is your preferred language?

Respecting every difference, treating each equally.

COMMENTARY

## Building the Foundations for Equitable Care

Amelia Shapiro, MBA, Dodi Meyer, MD, Laura Riley, MD, Brian Kurz, MPH, Daniel Barchi, MEM

DOI: 10.1056/CAT.21.0256

In 2020, NewYork-Presbyterian, Weill Cornell, and Columbia University launched an enterprise-wide, coordinated campaign to improve collection of race and ethnicity data, which included five key pillars: (1) a steering committee staffed by senior leaders, (2) improvements to streamline data collection process and structure, (3) standardized staff education, (4) direct patient communication, and (5) measurement and monitoring. As large and small health care systems are targeting equity as a key outcome, it is important to share lessons learned so that all can move together toward shared goals.

---

At NewYork-Presbyterian — an academic health care system affiliated with Columbia University Vagelos College of Physicians and Surgeons and Weill Cornell Medicine — our tripartite mission has long been to be a leader in medical education, groundbreaking research, and innovative, patient-centered clinical care. Our commitment to excellence in these areas includes a profound commitment to health equity.

It is critically important for us to understand and address the root causes of health inequities, including those that fall along racial and ethnic lines, as well as to measure our success in closing health equity gaps. Those efforts require widespread, reliable, and consistent data about our patients' race and ethnicity.<sup>1</sup> We acknowledge that race is a social construct; thus, differentiating by race is not a valid way to understand human difference. However, we also acknowledge that structural racism shapes the lives, opportunities, and health of many, and therefore race data can serve as a proxy for social vulnerability. Therefore, collecting and analyzing race and ethnicity data is critically important for NewYork-Presbyterian, Columbia, and Weill Cornell in our pursuit to achieve equity for all.
