Perinatal Mental Health Conditions Change Package
Authors

Tiffany Moore Simas, MD, MPH, MEd, FACOG, Faculty, Institute for Healthcare Improvement
Deborah Bamel, MPH, Director, Institute for Healthcare Improvement
Catherine Mather, MA, Senior Director, Institute for Healthcare Improvement

Acknowledgments

The Perinatal Mental Health Conditions Change Package was made possible with the generous funding of the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) under grant number UC4MC28042, Alliance for Innovation on Maternal Health (AIM). We thank Kelly McCutcheon Adams, LICSW and Lauren Enright for their contributions as members of the Institute for Healthcare Improvement (IHI) core team. We also thank our AIM colleagues, Emily Greenwood and Hannah Kaufman, for their steadfast partnership in this work, as well as our numerous expert faculty who contributed during the foundational expert meeting, interviews, and/or subsequent draft reviews: Kate Boydston; Nancy Byatt, DO, MS, MBA, FACLP; Andrea Carrillo, MA; Cecile Edwards; Daisy J. Goodman, DNP, MPH, CARN-AP, CNM; M. Camille Hoffman, MD, MSc; Courtney Johnson; Anna King, LCSW, PMH-C; Chris Raines, RN, MSN, WHCNP, PMHNP-BC, PMH-C; Felica Turner-Walton; and Amy Ushry, MPH, BSN, RN, CCMC.

These materials were developed with support from the Health Resources and Services Administration (HRSA) of the U.S. Department of Health and Human Services (HHS) as part of a cooperative agreement with the American College of Obstetricians and Gynecologists under grant number UC4MC28042, Alliance for Innovation on Maternal Health. The contents do not necessarily represent the official views of, nor an endorsement, by HRSA, HHS, or the U.S. Government. For more information, please visit HRSA.gov

Introduction

The Alliance for Innovation on Maternal Health (AIM) is a national data-driven maternal safety and quality improvement (QI) initiative. AIM works through state and community-based teams to align national, state, and hospital-level QI efforts to reduce preventable maternal mortality and severe morbidity across the United States.

The AIM Patient Safety Bundles are a core part of this work. To promote the successful implementation of these bundles, AIM partnered with the Institute for Healthcare Improvement (IHI) to create a series of associated change packages. This specific change package is designed to support Perinatal Quality Collaboratives (PQCs) and other state-based initiatives to leverage the AIM Perinatal Mental Health Conditions Patient Safety Bundle more effectively.

Why is this important?

The U.S. has the highest maternal mortality rate among high-income countries, and it continues to rise.1,2 The most recent data from 36 maternal mortality review committees (MMRCs) reveal that perinatal mental health conditions are the leading cause of pregnancy-related deaths.3 Prior reports from 14 MMRCs determined that all perinatal mental health–related deaths were preventable.3,4 In addition to mortality and severe morbidity, untreated and undertreated perinatal mental health conditions are associated with other significant negative consequences for perinatal individuals, along with adverse obstetric, fetal, neonatal, infant, partner, and societal outcomes.

Affecting upwards of 1 in 5 perinatal individuals, perinatal mental health conditions are the most common complications of pregnancy and the first year following childbirth.5–7 Negative consequences can be mitigated if perinatal mental health conditions are detected and treated, especially when done early. However, despite the availability of validated screening instruments and effective treatment, perinatal mental health conditions remain underdiagnosed and untreated or undertreated. Without intervention, less than a quarter of perinatal individuals with depression will receive any treatment, and markedly fewer will receive adequate treatment or achieve remission.8,9

Addressing perinatal mental health conditions needs to be done within systems that promote progression through the full mental health care pathway, which includes prevention, detection, assessment, triage and referral, treatment access and initiation, symptom monitoring, and measurement-guided treatment adjustments until symptom remission.8,10 This can be done by integrating obstetric and mental health care throughout the perinatal period, especially in ambulatory settings. System-level interventions to integrate obstetric and mental health care include collaborative care models and Perinatal Psychiatry Access Programs.11–15

It is important to recognize that there are marked disparities in maternal mortality, with especially high rates for those marginalized by racism and socioeconomic disadvantage. Similarly, although depression is more common in these groups, screening and treatment rates are lower. There is no health without mental health; nor is there maternal health equity without perinatal mental health equity.11,16,17
This change package aims to aid teams implementing the AIM Perinatal Mental Health Conditions Patient Safety Bundle by preparing them to integrate mental health and obstetric care, and by laying the foundation for respectful, equitable, and supportive care for all.

What is a change package?

A change package is a document listing evidence-based or best-practice changes specific to a topic and is usually organized around a framework or model. In this case, the Perinatal Mental Health Conditions Change Package is structured around the Perinatal Mental Health Conditions Patient Safety Bundle. Changes packages, including this one, are structured around the following components:

- **Primary Drivers**: Major processes, operating rules, or structures that will contribute to moving toward the aim. In this change package, the primary drivers are based on AIM’s Five Rs Framework (Readiness, Recognition & Prevention, Response, Reporting/Systems Learning, and Respectful Care).

- **Change Concepts**: Broad concepts (e.g., “move steps in the process closer together”) that are not yet specific enough to be actionable but that will be used to generate specific ideas for change.

- **Change Ideas**: Actionable, specific ideas for changing a process. Change ideas can come from research, best practices, or from other organizations that have recognized a problem and have demonstrated improvement on a specific issue related to that problem.

Taken as a whole, a change package has the potential to seem overwhelming. Based on the priorities of your state and community, we encourage you to start small by testing a couple of ideas connected to the aim you set. Through iterative tests of change (also known as Plan-Do-Study-Act (PDSA) cycles), you will have an opportunity to learn what works and what does not in your efforts to improve your processes. Initially, these cycles are carried out on a small scale (e.g., one patient on one day) to see if they result in improvement. Teams can then expand the tests and gradually incorporate larger and larger samples until they are confident that the changes will result in sustained improvement.
How to prioritize changes?

No team is expected to test all the listed change ideas. Consider this a menu of options from which you may choose what to tackle first. Each team will review their baseline data, progress to date, organizational priorities, and select an area(s) to prioritize. For example, some may start with one driver. Others may start by tackling one idea across all drivers. Start by choosing an area that you think could lead to an easy win.

You can also leverage the following tools to help you decide where to start:

1. **Pareto chart**: A type of bar chart in which the various factors that contribute to an overall effect are arranged in order according to the magnitude of their effect. This ordering helps identify the "vital few" — the factors that warrant the most attention.\(^{19}\)

2. **Priority matrix**: A tool that can better help you to understand important relationships between two groupings (e.g., steps in a process and departments that conduct those steps) and make decisions on where to focus.\(^{20}\)

3. **Impact-effort matrix**: A tool that helps identify which ideas seem easiest to achieve (least effort) with the most effects (highest impact). The ideas identified via this tool would be a great place to start.\(^{21}\)
Change Package

A Note on Symbols

Respectful, Equitable, and Supportive Care
In the latest revision of the AIM Perinatal Mental Health Conditions Patient Safety Bundle, a fifth R was added; Respectful, Equitable, and Supportive Care. This R is integrated throughout the change package, and all change ideas that fall under this R are marked with a ◊ symbol.

Additional Considerations
It is understood that every team utilizing this change package will be at a different point in this work. If your organization is further along in your perinatal mental health conditions improvement work and has found reliability in some of the change ideas below, we suggest testing the additional considerations in *italics* and marked by the * symbol.

### Implicit Bias and Respectful Care Training Resources

<table>
<thead>
<tr>
<th>Tier/type of education process</th>
<th>Resource/tool available</th>
<th>Brief description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>E-modules:</strong> Free maternal health–focused equity and bias e-module trainings for independent completion in about an hour or less</td>
<td>Diversity Science</td>
<td>Three e-modules focused on implicit bias and reproductive justice. Option to integrate into hospital learning management systems through ILPQC access.</td>
</tr>
<tr>
<td>The Office of Minority Health: Think Cultural Health</td>
<td>Four e-modules focused on Culturally and Linguistically Appropriate Services (CLAS) in maternal health care</td>
<td></td>
</tr>
<tr>
<td><strong>Programs:</strong> Fee-based day or multi-day trainings</td>
<td>Birthing Cultural Rigor: Basic Training in Obstetric Racism™ (BTOR™)</td>
<td>BTOR™ is a 12-week online course. The online BTOR™ is organized into six two-hour interactive modular units and six corresponding 60-minute coaching sessions.</td>
</tr>
<tr>
<td>Perinatal Quality Improvement SPEAK UP Against Racism Training</td>
<td>SPEAK UP training is a day-long interactive workshop that outlines strategies to help individuals and groups dismantle racism, provide high-quality, equitable care, and reduce perinatal health disparities.</td>
<td></td>
</tr>
<tr>
<td><strong>Other Supportive Resources</strong></td>
<td>Professionalism: Microaggression in the Healthcare Setting</td>
<td>Article provides strategies for health care professions to address microaggressions when they come up in day-to-day interactions with other health care professionals.</td>
</tr>
<tr>
<td></td>
<td>Addressing the Elephant in the Room: Microaggressions in Medicine</td>
<td>Article describes common microaggressions at the intersection of gender and race, and strategies providers and staff can use to respond to them.</td>
</tr>
<tr>
<td></td>
<td>Protecting Your Birth: A Guide for Black Mothers (and OB care team)</td>
<td>Guide on how racism / bias can affect pre- and postnatal care, and ideas to facilitate optimal patient-provider communication and promote respectful care</td>
</tr>
<tr>
<td>CDC HEAR HER Campaign</td>
<td>Resources to raise awareness of life-threatening warning signs during and after pregnancy and improve patient-provider communication, including patient story videos and discussion tools</td>
<td></td>
</tr>
<tr>
<td>-----------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td></td>
</tr>
<tr>
<td>Harvard Project Implicit Association Test</td>
<td>Test to check implicit bias before participating in equity training and/or health care hiring/candidate selection</td>
<td></td>
</tr>
</tbody>
</table>
